

HM Defense Press Release

HM Defense announces the Battle Bolt™

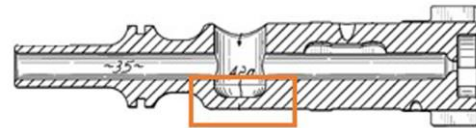

January 7, 2017

Mt. Orab, Ohio – HM Defense announces the release of its all-new Battle Bolt™, an enhanced durability bolt for M16, AR-10 and AR-15 rifles. The HM Battle Bolt™ corrects a natural weak point in existing Mil-Spec M16, AR-10 & AR-15 bolts where the cam pin hole passes through the bolt. Under extensive use, including the stress of combat, a standard Mil-Spec bolt can fail at the cam pin hole location.

The Battle Bolt™ by HM Defense eliminates the pass-through cam pin hole and replaces it with a cam pin socket and improved cam pin design. This new patent-pending design eliminates the natural weak point of Mil-Spec bolts by significantly increasing the amount of metal (and strength) at the cam pin location. The result - *No more broken bolts!*

Battle Bolt™ cut-away

Battle Bolt™ cross section

“The Battle Bolt™ design provides a substantial improvement in long-term durability over the existing Mil-Spec bolt,” said Clay Barker, General Manager at HM Defense. “Every M16 and AR rifle can benefit from our Battle Bolt™ technology”

The HM Battle Bolt™ is 100% compatible with Mil-Spec M16, AR-10 & AR-15 BCGs and can be installed as a drop-in bolt replacement in any existing M16 or AR-15 rifle. The HM Battle Bolt™ will be standard on all HM Defense AR rifles and available as a bolt replacement kit starting in 2017.
